ABSTRACT OF THE INVENTION

The invention provides isolated polypeptides
that stimulate gastrointestinal smooth muscle

5 contraction, including human prokineticin 1 and human
prokineticin 2 polypeptides, and functional fragments and
modifications thereof. Also provided are methods of
stimulating gastrointestinal smooth muscle contraction in
a mammal, by administering to the mammal an effective

10 amount of a prokineticin polypeptide. The invention also
provides nucleic acid molecules encoding a prokineticin
polypeptide, and antibodies that selectively bind a
prokineticin polypeptide. Further provided are methods
of identifying a prokineticin receptor ligand, agonist or
antagonist.
